

See overleaf for single mains circuit option (1 x 4-core cable)

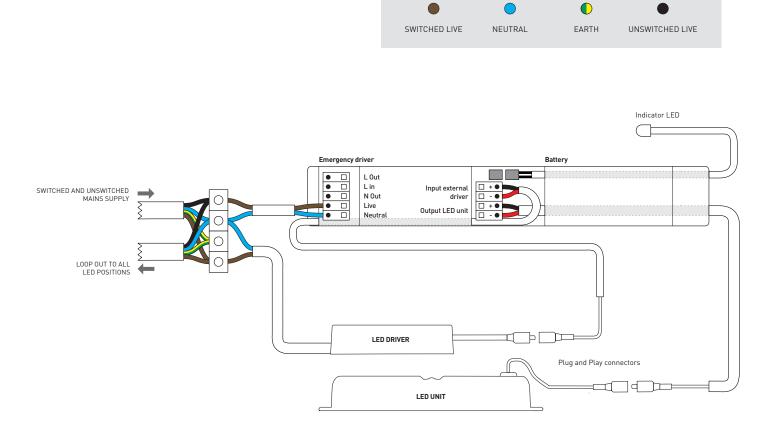

Installation

- 1. Refer to the LED unit installation instructions, install all non-emergency LED units.
- For each emergency light position, drill an 18mm 2. hole close to the LED unit. This is for the LEDEP09 indicator LED.
- 3 SWITCHED LIVE CIRCUIT Connect the LED driver mains cable to the switched live supply.
- UNSWITCHED LIVE CIRCUIT 6 Connect the LEDEP09 live and neutral terminals to the unswitched live supply.
- Fit end covers to both ends of the LEDEP09. 6
- Connect the battery pack to the LEDEP09 (plug & play).
- Connect the LEDEP09 output wires with plug and 7 play connectors to the relevant connectors of the LED unit and LED driver.
- Feed the junction boxes/connectors and LEDEP09 8. though the ceiling hole.
- Feed the indicator LED down through the hole. 9
- Fit the indicator housing to the indicator LED, then press the housing into the ceiling. Note: If the drilled hole is slightly larger than 18mm, it may be necessary to apply a little adhesive to the housing to secure it.
- 11. Fit the LED unit into the ceiling.
- 12. See overleaf for commissioning.

EN

Emergency Pack Commissioning

- Install unit in ceiling according to the instructions.
 Provide an uninterrupted mains power supply for 24 hours.
- 3. Check that the indicator LED light is lit. This confirms that the batteries are charging.
- 4. Remove the mains supply the lamp will operate under battery power for 3 hours minimum.
- 5. Restore mains power to the unit, check light functions correctly.

Note

- In normal operation, the green LED will be constantly lit to indicate that the battery is charging. If the green LED is ever not lit, investigate immediately and rectify the fault.
- Periodic testing of the unit must be performed in line with the appropriate regulations.

Battery must be replaced when the unit no longer meet it's rated emergency duration, or if a battery fault occurs. Contact Collingwood Lighting for a suitable replacement.
